Reduce maintenance costs by 60% - 90%

Reduce energy and chemical consumption by 10% or more

Reduce water consumption by 3% - 5%
**Why Do I Need Filtration?**

*Airborne debris, dirt, silt, sand and other suspended particles negatively affect heat transfer efficiencies through the creation of scale, fouling, biological activity, and corrosion.*

**Scale**

Scale is characterized by plating-out of Calcium Carbonate (\(\text{CaCO}_3\)) on heat transfer surfaces. These deposits are created through precipitation of dissolved solids from cooling tower water. As \(\text{CaCO}_3\) mixes with silica and water it forms hard concrete scale on heat transfer surfaces – leading to reduction in heat transfer. Scale formation is the most common reason for the need to punch and clean chiller tubes.

**Fouling**

Suspended solids (dirt, silt, sand, airborne particulate matter and corrosion by products) in cooling tower water form deposits and collects on heat transfer surfaces, cooling tower fill, cooling tower basins, and spray nozzles. Collection of suspended solids in heat transfer equipment results in scale and fouling - thereby leading to loss of heat transfer efficiency, increased maintenance, and decreased equipment life.

**Biological Activity**

Evaporative coolers and cooling towers offer a warm, moist environment for Biological Activity to grow and multiply. Biological Activity (algae, legionella, slime and biofilms) contributes to fouling of heat transfer surfaces (including tower fill), corrosion in all parts of the cooling tower system and creates health hazards.

**Corrosion**

Corrosion in cooling tower basins is caused by suspended solids that buildup at the bottom of the basin. These settled solids not only provide a breeding ground for biological growth but also corrode the basin floor, thus increasing maintenance costs and reducing life of the tower basin.

*Suspended solids clog tower nozzles and water distribution systems – resulting in loss of thermal capacity as well as scale and mineral buildup on tower fill and closed tower coils.*

*Suspended solids reduce heat transfer areas and decrease flow inside tubes by accumulating on internal tube fins.*

*Solsids in cooling tower water clog channels and create areas of low thermal conductivity.*
How Big Is A Micron?

**PROBLEM:**
The chart below shows correlation between scale thickness and increase in energy consumption.

**Scale Buildup vs. Energy Consumption**

<table>
<thead>

* Field Fouling Allowance: The rating Fouling Factor for heating and heat reclaim heat exchangers shall be 0.000100 h•ft²•F˚/Btu for closed loop and 0.000250 h•ft²•F˚/Btu for open loop systems. Source: AHRI 2011 Standard for Performance Rating of Water-Chilling and Heat Pump Water-Heating Packages Using the Vapor Compression Cycle. † Higher fouling rates can lead to chiller shutdown due to increased approach temperatures.

Increased approach temperatures can result from higher fouling rates – leading to chiller shutdown.

**For every .001” increase in Fouling Factor, your energy consumption increases by 11%.

“A typical 200 ton cooling tower operating 1000 hours may assimilate more than 600 lb of particulate matter from airborne dust and the makeup water supply.” (Broadbent et al. 1992)

- 2012 ASHRAE Handbook, HVAC systems and Equipment, Page: 40.16

**LAKOS Filtration when combined with Water Treatment…**

...Reduces Corrosion, Scale, Fouling and Biological Activity

**Particle Quantity vs. Particle Volume Comparison**

- 5 µm: 20%
- 10-75 µm: 20%
- 0.5 µm: 20%
- 3 µm: 20%
- 1 µm: 20%
- Less than 10 µm: 5%

95% range from .5 µm to 75 µm (Particle Quantity Pie Chart), the volume these particles represent is not equal (Particle Volume Pie Chart). The particles ranging from 10-75 µm represent 95% of total volume.
**Basin Sweeping**

**Benefits:**
- Reduce under-deposit corrosion, remove food source for biological activity and extend life of the basin
- Minimize manual cleaning, maintenance, downtime and risk of injury
- HydroBoosters™ sweep cooling tower basin to remove suspended solids at the source
- Maintain downstream thermal efficiency of heat transfer surfaces

**Full Stream**

**Benefits:**
- Filter 100% of flow from the cooling tower to downstream equipment – with zero downtime
- Maintain design heat transfer efficiencies on new and existing equipment
- Extend maintenance intervals for cleaning chiller tubes, plate heat exchanges, compressors, etc.
- Zero filtration maintenance when using LAKOS Controllers and Automated Purge Valves
- Point of use application

*Using a LAKOS Separator in Full Stream application allows for filtering 100% of flow, from cooling tower to downstream equipment, thereby extending equipment life and maintaining design heat transfer efficiencies on new and existing equipment.*
Using a LAKOS System in Side Stream applications helps reduce suspended solids in mainstream flow, thereby reducing downstream heat transfer loss.

Benefits:
- Economical filtration solution
- Large or variable flow application where full flow is not an option and basins are not accessible
- Reduce suspended solids in mainstream flow
- Easy to retrofit
- Zero liquid loss options with LAKOS Solids Recovery Vessel
- Zero filtration maintenance when using LAKOS Automated Purge Valves

Using a LAKOS System for closed loop filtration provides 24/7 filtration with zero system downtime, consistent pressure loss and no backwash requirements. Removing dirt, scale, rust and other suspended solids from closed loop systems helps maintain system design efficiencies.

Benefits:
- Remove solids generated in closed loops (chiller water/propylene/ethylene glycol) by using side stream filtration
- Zero liquid loss when using a Solids Recovery Vessel (SRV)
- Direct replacement for side stream bags or spiral wound cartridges
How It Works

LAKOS eHTX Separators feature improved internals and operate differently than our HTX Separators. To learn more about how our HTX Separators operate, see LAKOS Literature LS-625.

1. **INLET**
   Dirty water enters here

2. **Patented internal tangential Swirlex Slots™** dramatically accelerate flow with minimal pressure loss and turbulence

3. **Solids are separated from fluid via centrifugal action**

4. **Patented Vortube™** creates stabilized vortex flow for finer solids removal at minimal pressure loss

5. **Free of separated solids, fluid spirals up vortex to outlet**

6. **Solids collected in bottom are purged from Separator**

7. **OUTLET**
   Clean water exits here

8. **Automated options are available for purge solids**

**LAKOS Separators** use slots to accelerate liquid and minimize turbulence - allowing highly efficient centrifugal separation of solids from liquids.

**Proprietary lower vortex stabilization methodology** further enhances solids separation.

**Patented Vortube geometry capitalizes on strong pressure gradient present at the center of the vortex to effectively pull finer solids into the collection chamber.**
eHTX Series

High Efficiency Liquid-Solid Separators

Features and Benefits:

- Filter performance rated to remove 98% of all solids 44 micron (325 mesh), 2.6 specific gravity and larger in a single pass and 99% down to 25 micron (550 mesh) in recirculated systems
- Low and steady pressure loss. 2 – 15 psi (.13 to 1.03 bar)
- Continuous filtration and no backwashing; periodic automated purging
- Optional materials of construction and ASME code available
- Flow ranges from 15 – 990 US gpm (3 – 224 m³/hr). Higher flow rates available

For more information, see LAKOS Literature LS-924

eTCX Series

High Efficiency Basin Sweeping and Side Stream Filtration with eHTX Series in Packaged System

Features and Benefits:

- Filtration efficiency of 99% at 25 micron (550 mesh), 2.6 specific gravity, in a recirculating pass
- Premium Efficiency (PE) 1750 RPM pumps provide higher level of energy savings
- Can be used for basin cleaning or side stream cleaning
- 80% reduction in pump motor noise

For more information, see LAKOS Literature LS-910

HTX/HTH Series

High Performance Liquid-Solid Separators

Features and Benefits:
- Filter performance rated to remove 98% of all solids 44 micron (325 mesh) 2.6 specific gravity and larger in recirculated pass, or 98% of 74 micron (200 mesh) in a single pass
- Low and steady pressure loss. 3 – 12 psi (.2 to .82 bar)
- Continuous filtration and no backwashing; periodic automated purging
- Optional materials of construction and ASME code available
- Flow ranges from 16 – 12,750 US gpm (4 – 2896 m³/hr). Higher flow rates available

For more information, see LAKOS Literature LS-624 and LS-625

HTX/HTH Series

Filtration Applications:
- Full Stream
- Side Stream
- Closed Loop

Water Usage
- Zero Water Loss Options Available

Solids Meter
- 5µm
- 25µm
- 44µm
- 74+µm

Maintenance
- High
- Med
- Low
- Zero Maintenance

Basin Sweeping with TC Series

TCX

Automatic Ball Valve option available

TowerClean Series

Features and Benefits:
- Reduce manual basin cleaning by sweeping basin of suspended solids
- Extend equipment life and remove food source for biological activity by removing solids at source
- Remove suspended and settled solids, thus preventing under-deposit corrosion
- LAKOS auto purge and collection options remove solids – without downtime or system depressurization, and with zero water loss
- Flow rates: 30 – 1670 U.S. gpm (7 – 379 m³/hr)

For more information, see LAKOS Literature LS-710

Filtration Applications:
- Basin Sweeping

Water Usage
- Zero Water Loss Options Available

Solids Meter
- 5µm
- 25µm
- 44µm
- 74+µm

Maintenance
- High
- Med
- Low
**SideStreamClean Series**

**Features and Benefits:**
- Remove solids from mainstream flow
- Optimize the effectiveness of water treatment programs
- LAKOS auto purge and collection options remove solids – without downtime or system depressurization, and with zero water loss
- Extends maintenance intervals for cleaning chiller tubes, plate heat exchangers, compressors, etc.
- Flow rates: 30 – 1670 US gpm (7 – 379 m³/hr)

For more information, see LAKOS Literature LS-715

**SideStream Clean with TB Series**

**Filter Solids Down to .35 Micron with Plus Series**

**Features and Benefits:**
- Remove solids as fine as .35 micron
- TC, TB and eTCX Series can be modified to include Plus Series
- All-in-one space saving system on a skid
- Provides polishing of the system flow without backwash requirements of a sand filter
- Flow rates: 30 – 1670 US gpm (7 – 379 m³/hr)

For more information, see LAKOS Literature LS-710, LS-715, and LS-910

Zero Water Loss Options Available
Products

Sand Filters

Remove Fine Floating Solids

Features and Benefits:

- Exclusive, precision-engineered underdrains encourage optimum flow
- Manifold multiple units for larger flow rates
- Fully Automatic systems with adjustable backwash settings

STS and CTS Series offer 95% filtration efficiency at 10 micron. For more information, see LAKOS Literature LS-640 and LS-720

Micron [µm] Removal

Sand Filter Backwash Reduction

Improve Sand Filter and Barrier Filter Performance by Reducing Backwash Cycles

Features and Benefits:

- Reduce backwash and maintenance associated with sand filters, bag filters, and screen filters
- Extend sand filter and barrier filter operating life
- Continuous filtration with steady pressure loss; periodic automatic purging with zero maintenance
- Pre-filter for side stream bags, spiral wound cartridges, inline screens, strainers and sand filters

Basin Sweeping Side Stream Micron (µm) Removal
Separators And System Accessories

Solids Collection

Zero Liquid Loss and Capture Separated Solids

Features and Benefits:
- Capture separated solids easily and return liquid back to system
- Remove collected solids without interrupting system flow
- Single (1) bag Solids Recovery Vessel (SRV) available in two sizes: 16-inch (SRV-816) and 33-inch (SRV-833)
- Three (3) bag Closed Recovery Vessel (CRS) for 10” separators and larger
- Filter bags available from 10 micron to 50 microns
- Optional indicator package provides convenient way to determine bag change-outs on SRV-816, SRV-833 and CRS-836B
- Optional dry contact available for remote monitoring. Can be tied to BMS (Building Management System)
- Lower waste water treatment costs

For more information, see LAKOS Literature LS-576 and LS-622

Purge Options

Automated Solids Purge

Features and Benefits:
- Purge separated solids from LAKOS Separators at pre-determined intervals. LAKOS Controllers provide options to control and adjust purge intervals and duration
- LAKOS Purge valves are capable of handling all types of fine, fibrous, and mildly abrasive solids
- EFS: Electric Battery Backup Fail-safe valve automatically closes the valve in the event of a power failure
- LAKOS Controllers feature solid state reliability, thus removing the need for routine maintenance
- All LAKOS Valves are CE compliant

For more information, see LAKOS Literature LS-238 and LS-913

LAKOS Electric Purge Valves automate collected solids removal, require zero maintenance and provide controls to manage purge intervals and duration.
LAKOS Separators have been independently tested and certified by an independent testing agency, the International Center for Water Technology (ICWT), confirming our separators’ filtration performance and capability to remove troublesome particle matter from pumped water.

For over 30 years the internationally recognized ICWT/CIT Testing Laboratories have been providing independent, third party testing to a wide range of irrigation and other industries around the world. ICWT has experience with hydraulics, pumps, filters, and valves. Fluid component testing provides manufacturers, distributors and end-users with accurate performance data for applicability assessment and enable product development. ICWT was recently certified by IAPMO R&T - North America’s premier third party certification body for plumbing and mechanical products. More information about the testing agency and testing process can be found at www.californiawater.org.

Selected customers who installed LAKOS Filtration Products

Claude Laval Corporation, headquartered in Fresno California since 1972, is recognized worldwide for engineering, manufacturing and marketing the original centrifugal action solids from liquids separator and being the world-wide leader in cyclonic separation technology. LAKOS Separators are manufactured and sold under one or more of the following U.S. Patents: 5,320,747; 5,338,341; 5,368,735; 5,425,876; 5,578,203; 5,622,545; 5,653,874; 5,894,995; 6,090,276; 6,143,175; 6,167,960; 6,202,543; 7,000,782; 7,032,760 and corresponding foreign patents, other U.S. and foreign patents pending.
