

Premium Efficiency Liquid-Solid Separator

Flow Range:

55 to 1,030 U.S. gpm (12.5 – 233 m³/hr)

Consult factory for higher flow rates.

Maximum Standard Pressure:

ANSI flange – 250 psi (17.2 bar) at 230° F (110° C)

DIN flange – 232 psi (16 bar) at 230° F (110° C)

JIS flange – 203 psi (14 bar) at 230° F (110° C)

Maximum Temperature: 230° F (110° C)

Pressure Loss: As low as 3 psi

eJPX is our highest efficiency liquid-solid separator that provides fine particle removal (up to 98% of 44 micron and larger) using centrifugal action for industrial applications. This results in greater solids removal, lower maintenance, and fewer unexpected downtimes.

eJPX Features and Benefits:

- Filter performance rated to remove up to 98% of all solids 44 micron (325 mesh), 2.6 specific gravity, and larger in a single pass.
- No moving parts to wear out; no barriers or media to replace.
- Low and steady pressure loss; as low as 3 psi.
- Continuous filtration and no backwashing.
- SmartPurge™ port built into each model - allows for quick installation of SmartPurge™ System.
- Available in vertical and low-profile configurations.
- Optional materials of construction and ASME code available.
- Maintain design efficiency of downstream heat transfer surfaces.
- ANSI/DIN/JIS flanges available.

LAKOS Separators & Systems must be installed downstream of the main System Pump. Do not install on the suction side of the main system pump. Flow must be pushed through the separator and not pulled. Consult LAKOS for questions.

Higher Flow Rates

Manifolding in Parallel for High Flow Rates

eJPX Separators can be manifolded together to achieve higher flow rates. LAKOS provides all necessary piping to connect separators to a single inlet/outlet.

Example: Two eJPX-0560-V Separators increase flow range to 1120-2060 US gpm (254 – 468 m³/hr)

Purging Options *(Maximum pressure rating varies by valve)*

SmartPurge™ Purge Sensor

SmartPurge™

LAKOS SmartPurge™ Sensor – detects solids level within the LAKOS eJPX Separator and activates automated purge. More efficient purge cycles leads to labor and energy savings.

- Separator purges only when required, reducing energy costs, fluid loss and maintenance time
 - 304 stainless steel
 - Vibrating blade tuned to sense changes in solids level within the LAKOS Separator
 - Failsafe mode to warn of improper operation
 - User adjustable timed purges
 - Works with all LAKOS purge accessories
- Refer to form LS-972 for details.

Ball Valves

AFS Valve

AutoPurge-Fail Safe Pneumatic Ball Valves – Provides the added safety of closing the valve during a power failure. Compressed air and electricity are required. Refer to form LS-356 for details.

ABV Valve

AutoPurge-Ball Valves – Requires only electricity to actuate the valve according to programmed purge frequency and duration. Refer to form LS-238 for details.

Pinch Valves

APP Valve

AutoPurge-Pneumatic Pinch Valves – Preferred technique for durability and abrasive solids. Requires electricity for the programmable controller and compressed air to operate the valve. Refer to form LS-237 for details.

AKE Valve

AKE Pinch Valve – Features heavy-wall rubber construction for extended duty in tough applications. Requires electricity for the programmable controller to operate. No compressed air requirement. Refer to form LS-729 for details.

How It Works

LAKOS eJPX Separators feature improved internals and increased efficiencies as compared to our JPX Separators. To learn more about how our JPX Separators operate, see LAKOS Literature LS-631 & LS-632.

2 PATENTED SWIRLEX SLOT

LAKOS Separators use slots to accelerate liquid and minimize turbulence - allowing highly efficient centrifugal separation of solids from liquids.

3 INTERNAL BARREL

Proprietary lower vortex stabilization methodology further enhances solids separation.

4 PATENTED VORTUBE

Patented Vortube geometry capitalizes on strong pressure gradient present at the center of the vortex to effectively pull finer solids into the collection chamber.

Independent Testing

Filtration Test completed on Lakos Separator – eJPX-0560

The filter assembly was installed with test components defined as follows installed in the following order starting upstream:

- 1) 12" Venturi-type flow meter
- 2) 55 micron disc filter assembly
- 3) 6" pipe spool with sand-injection pump
- 4) Separator under test
- 5) 6" pipe spool
- 6) 20 micron disc filter assembly

Test Conditions: 950 gpm, 15.5 psi loss

Test #1 Sample Breakdown (Grams):

45-75 micron: 200
Recovered grams from downstream filters: 7.9
Filter efficiency: $192.1 / 200.0 = 96.1\%$
Note: Media: Quartz, Silicon Dioxide, specific gravity: 2.6

Test #2 Sample Breakdown (Grams):

22-32 micron: 700
Recovered grams from downstream filters: 7.3
Filter efficiency: $692.7 / 700.0 = 99.0\%$
Note: Media: Alloy Fe45Si, specific gravity: 5.4

Test #3 Sample Breakdown (Grams):

22-32 micron: 700
Recovered grams from downstream filters: 2.3
Filter efficiency: $697.7 / 700.0 = 99.7\%$
Note: Media: Alloy 17-4 PH, specific gravity: 7.8

LAKOS Separators have been independently tested and certified by an independent testing agency, the International Center for Water Technology (ICWT), confirming our separators' filtration performance and capability to remove troublesome particle matter from pumped water.

For over 30 years the internationally recognized ICWT/CIT Testing Laboratories have been providing independent, third party testing to a wide range of irrigation and other industries around the world.

ICWT has experience with hydraulics, pumps, filters, and valves. Fluid component testing provides manufacturers, distributors and end-users with accurate performance data for applicability assessment and enable product development. ICWT was recently certified by IAPMO R&T - North America's premier third party certification body for plumbing and mechanical products. More information about the testing agency and testing process can be found at www.californiawater.org.

This test agency is available and approachable to confirm its test methodologies and results.

LAKOS Corporation, headquartered in Fresno California since 1972, is recognized worldwide for engineering, manufacturing and marketing the original centrifugal action solids from liquids separator and being the world-wide leader in cyclonic separation technology.

LAKOS Separators are manufactured in the USA.

All LAKOS eJPX Separators are warranted for five (5) years from date of delivery.
